# Install and Setup a Website in IIS on Windows 10

You'll be up and running in no time

Written by: [Guy McDowell](#)

Posted on: May 15th, 2020 in: [Windows 10](#)

If you want to learn more about web design and development, installing Internet Information Services (IIS) on your Windows 10 computer is a good method. IIS is a free [Windows Feature](#) included in Windows 10, so why not use it?

There are three ways to install and set up a website in IIS on Windows 10; using the Graphical User Interface (GUI), PowerShell, or Windows CMD. We'll be using each method to do a basic

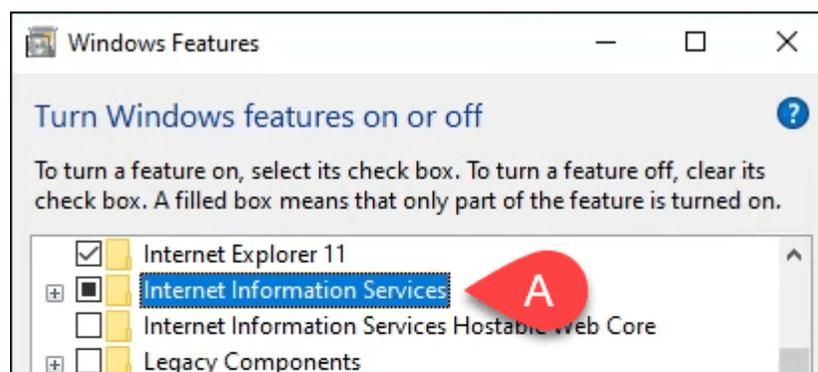

1. Start typing "turn on windows" in the Search bar. The **Turn Windows features on or off** utility will show as a result. Click on it.

- You're The Web Now!

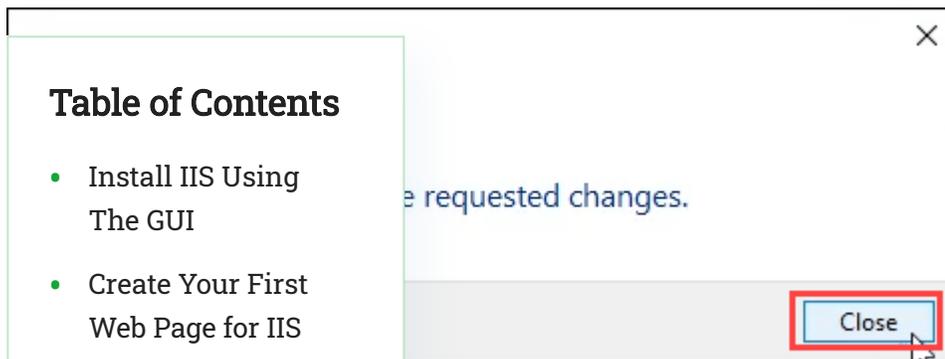

The screenshot shows the Windows Search interface. The search bar at the bottom contains the text "turn on windows". The search results are displayed in a list. The top result is "Turn Windows features on or off" under the "Best match" section, with a "Control panel" icon. Below this, under the "Search the web" section, there are two results: "turn on windows - See web results" and "turn on windows defender".

2. The **Windows Features** window will open. It may take a bit for the different features to load. Once it does, click on the checkbox next to **Internet Information Services** and then click the **OK** button.

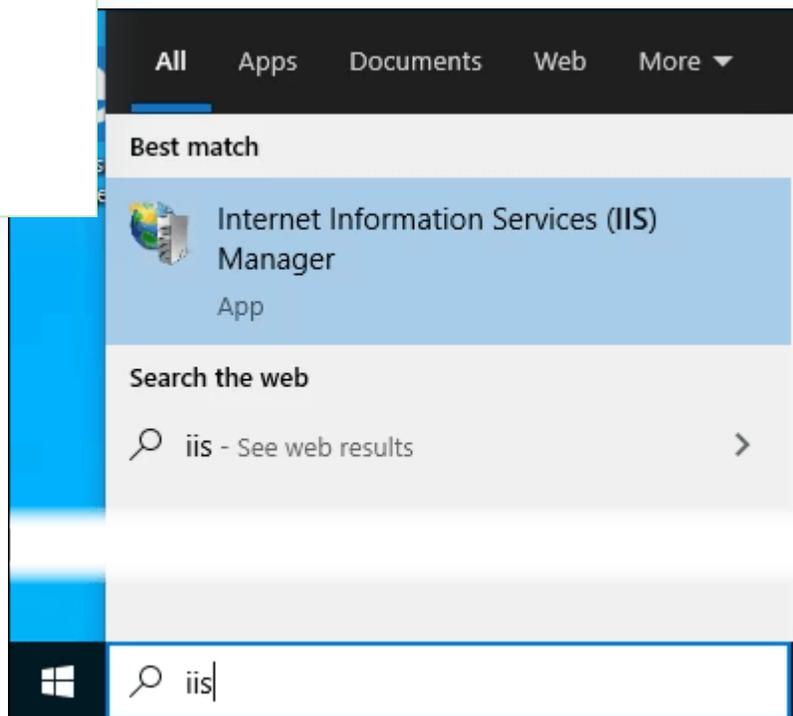

**Close** button.

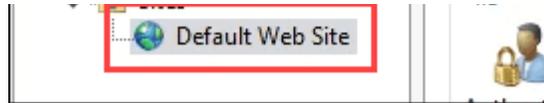

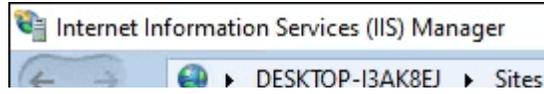

alled and working, type **IIS** in the **Search** bar near the **Start** button. **Information Services Manager** as a result. Click on that to open it.

5. When IIS Manager opens, look in the left pane of the window under **Connections**. Expand the tree menu until you see **Default Web Site**. That's a placeholder site that is installed with IIS.

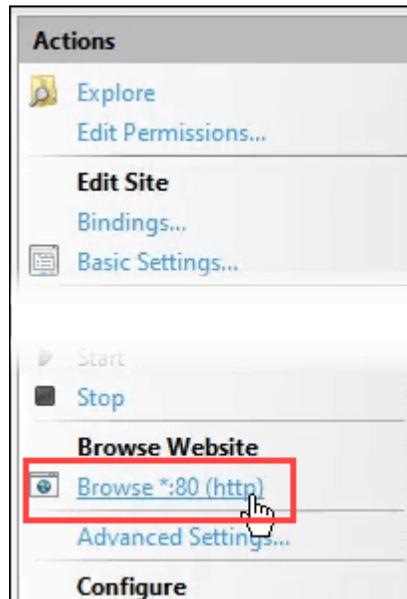

Click on it to select it.

In IIS Manager look under the **Browse Website** section. Click on **Browse** to view the default web site in your default web browser.

7. You'll see a web page like the following. Notice in the address bar that it says **localhost**. That's the address to type in to go to your new website.

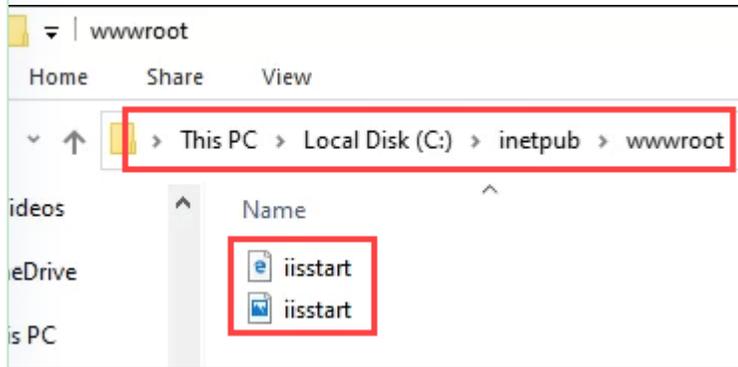

# Create Your First Web Page for IIS

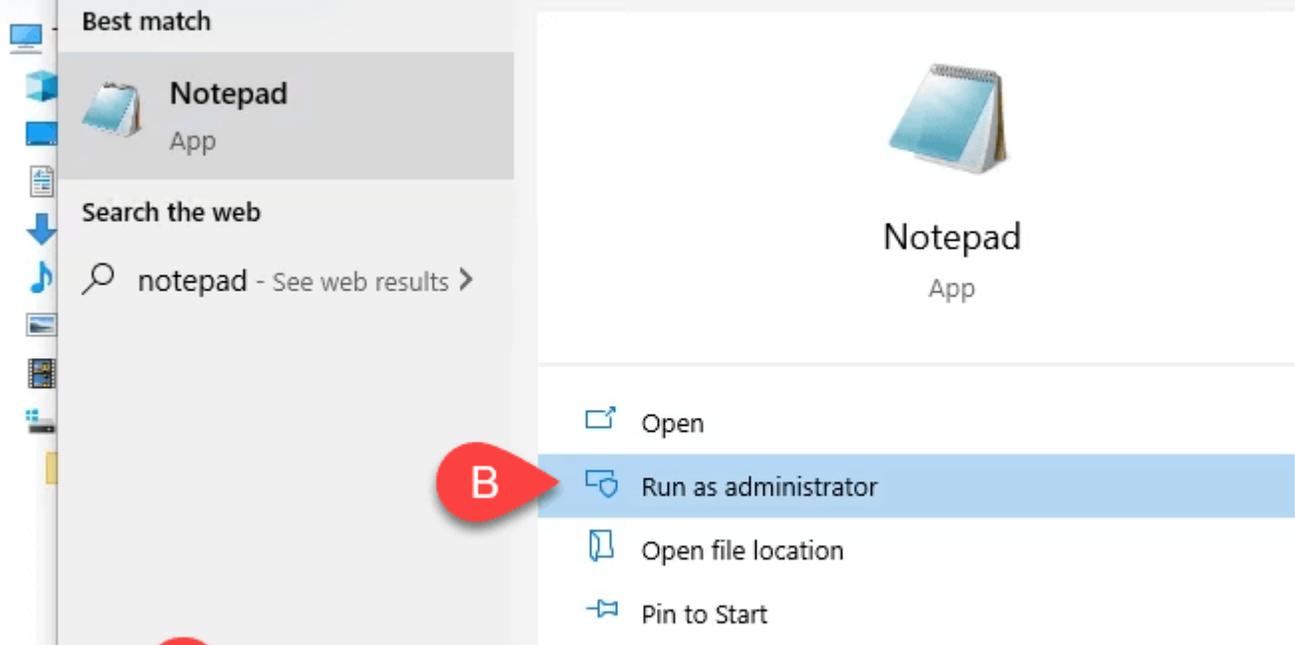

files that make up the website need to be stored. You'll see the default IIS web page file, **iisstart.html**, and the image shown on the page, **iisstart.png**. This is where you'll save your

Name	Date modified	Type
iisstart	5/3/2020 8:11 AM	HTM File
iisstart	5/3/2020 8:11 AM	PNG File

4. Now that it's saved as the right filetype, let's put some content in it. Enter the following HTML code for a very basic web page and save it:

```
<html>
<body>
<h1>Hello World!</h1>
</body>
</html>
```

```

```
completed successfully.
```

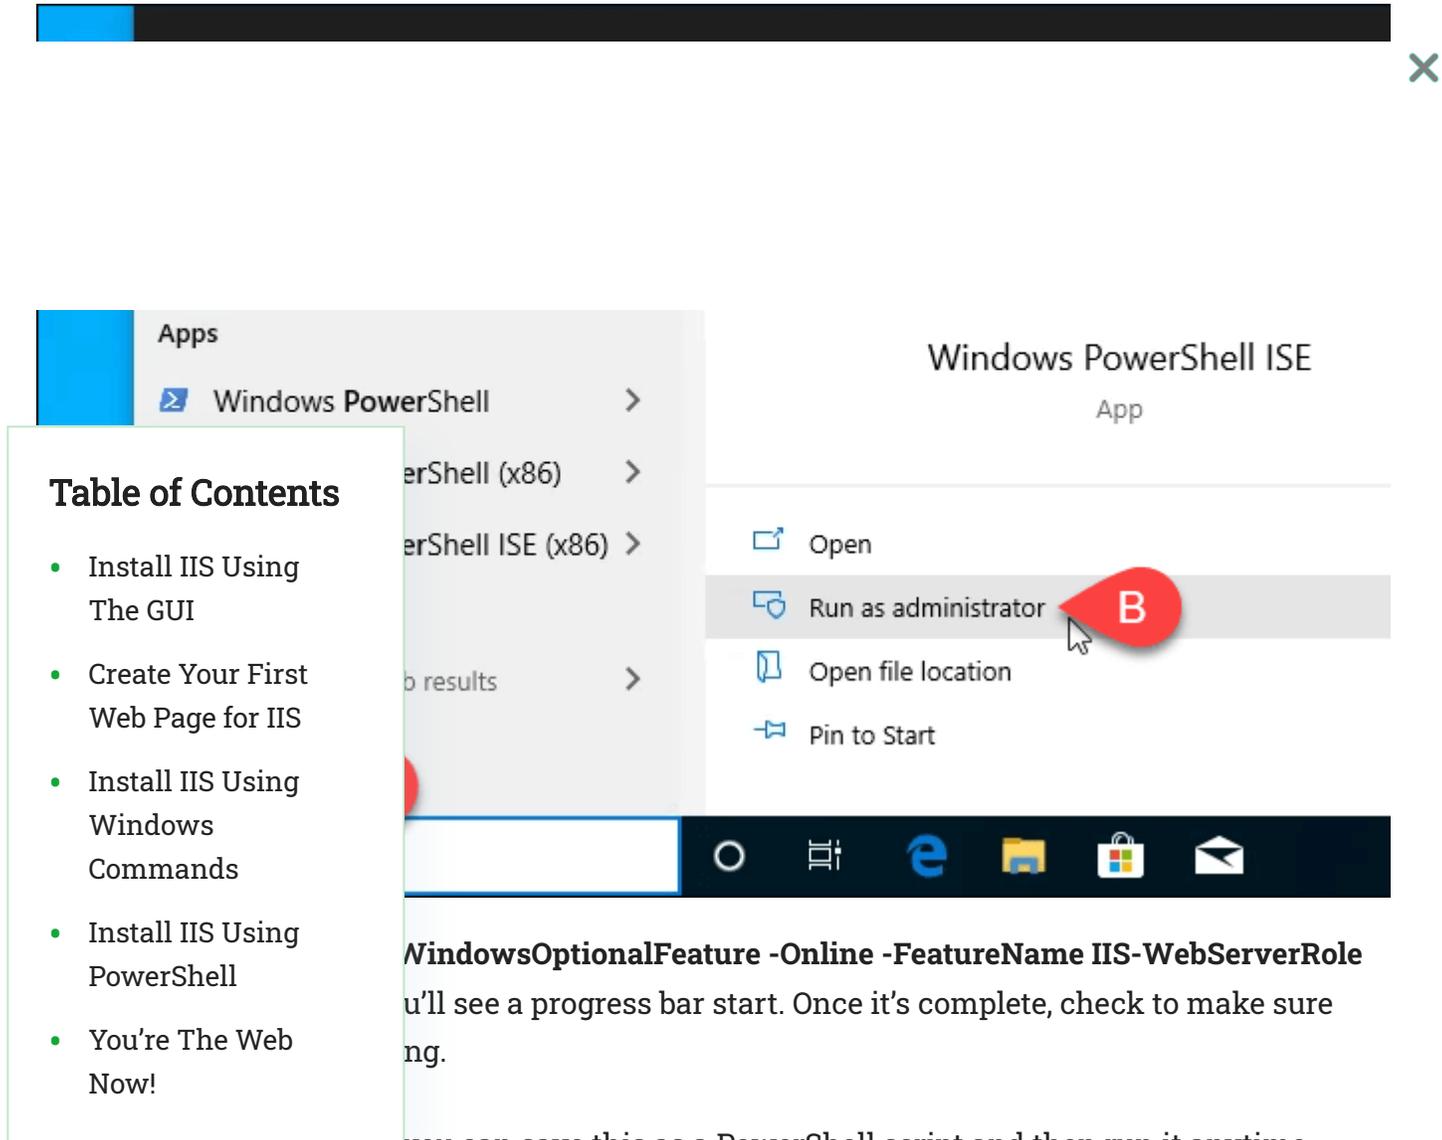

```
C:\Windows\system32>
```

4. Check to ensure you can open the IIS Manager and that the installation worked, using steps 4-7 from the **Install IIS Using The GUI** section.

## Install IIS Using PowerShell

Learning to do things like installing IIS in PowerShell is a huge benefit for two reasons. One, it's the easiest and fastest way to do most administrative tasks in Windows. Two, you can save your PowerShell commands, known as cmdlets, as a script and run them anytime on any Windows computer or server.

1. Type **powershell** in the search bar and one of the results should be **PowerShell ISE**. Click on **Run as administrator**.

5. This step is optional, but you can save this as a PowerShell script and then run it anytime. Work with the script and add different parameters. Eventually, you'll have an IIS install script that sets things up exactly as you want it, every time, with a single click.

## You're The Web Now!

This is just the beginning of what you can do with making your own website in IIS. Look into using IIS for FTP file transfer or media hosting as well. Also, look into [Microsoft's Web Platform Installer](#) for simplified ways to install and learn things like WordPress, PHP, [Python](#), and more.
